Fagor Arrasate receives important orders which reinforce its positioning worldwide

The Consortium VW and Daimler have put their trust, once again, in Fagor Arrasate: VW for the first European project of servo-conventional hybrid presses at the Barcelona and Daimler plant for a Servo Blanking Aluminum Steel for Bremen

Bosch commissioned the development of the project for the manufacture of dishwasher doors to be installed in the United States

ArcelorMittal selects Fagor Arrasate to undertake its aluminum expansion process for the automotive industry

Fagor Arrasate has once again raised the trust of worldwide reference customers by being awarded important orders that reinforce its positioning in its different business areas. These orders include those received by the Consortium VW, Bosh, ArcelorMittal, Daimler or Nanshan Aluminum.

The VW Consortium has again placed its trust in Fagor Arrasate to carry out the first European project of hybrid servo-conventional presses, Wave Line, at the Barcelona´s Free Zone plant. The awarding comes after the success in 2012 of the implementation of a robotic line of presses for the production of auto parts in South Africa´s factory. The installation for this new order is composed of a servo-driven mechanical press of 21,000kN plus five link drive presses of 12,000kN each, and has a total strength of 81,000kN.

This contract is in addition to Bosh's new order, which has chosen Fagor Arrasate to develop the project for the manufacturing of dishwasher doors (Dishwasher outer door line) to be installed in the United States. At the time of awarding the project, the German company has opted for the technological benefits of Fagor Arrasate, which offers a cycle time of 8 sec/piece, an automatic adjustment system and a quick change of tools that will enable the manufacture of different components on a single line. The award comes after the successful experience of recent projects in Turkey and Poland.

The engineering and automation capacity accumulated in the materials process is making leading world-class companies place their trust in Fagor Arrasate for the development of projects in steel, aluminum or combinations of these two elements. ArcelorMittal has opted for Fagor Arrasate to undertake its aluminum expansion process for the automotive sector by ordering a complete line of longitudinal coil cutting, with width up to 2000 mm and thickness up to 5 mm, for its German plant in Neuwied. In addition, Daimler will receive a Blanking Line with Servo-press for steel and aluminum, in thicknesses of 0.6 to 2.5 mm, which includes the new generation of flatteners and a high level of synchronization between the different elements that form the line, capable of reaching 85 spm. The Line will be located in its facilities of Bremen in Germany.

FAGOR ARRASATE

On the other hand, within the expansion in which Fagor Arrasate is immersed beyond those industries to which it has traditionally directed its products, the Basque cooperative continues with its progression in the aeronautical industry after the order received by the company Nanshan Aluminum to supply a 2650 x 4 mm aluminum cross cut line.
