

As a competent partner for clamping systems for machine tools and forming machines BERG Spanntechnik is celebrating its 100th anniversary this year. The modern and down-to-earth family business attaches great importance to reliability, flexibility and a consistent quality of its products.

For the EuroBLECH 2018 and together with the Fraunhofer Institute BERG has developed a tool clamping system 4.0 equipped with sensor technology. The integrated condition monitoring system serves the preventive maintenance and early failure detection of each tool clamp and thus contributes to the maintenance or increase of productivity.

In addition to its products BERG Spanntechnik also offers extensive services to ensure the productiveness of its customers: preventive maintenance, fast repairs, qualified technical training, support during commissioning or assistance in troubleshooting.
